

Dear Sirs,

XM Instant Traffic and Weather is not yet to my city, but I can tell you that I find the service immensely helpful when I travel by car to Orlando or Tampa. Just yesterday, I found XM to be helpful in broadcasting an AMBER alert to all of the subscribers listening in on the Orlando channel. In the state of Florida, if a child is kidnapped, an AMBER alert goes out to all FL DOT Highway signs, but not all radio stations. In addition to having XM broadcast traffic or weather, now XM has taken it on itself to broadcast public service information.

I believe that XM Radio can do more good for all of its listeners if they are managed by the FCC directly, instead of having the National Association of Broadcasters try and police them.
